- *Real-Time Fermentation Graphs*
- *Web-Browser Access from Anywhere*
- *Alarm Notifications via Cell Phone and E-mail*
- *Chiller Feedback for Energy Savings*
- *Easy Upgrade to TANKNET® PROFESSIONAL*

## MONITOR AND CONTROL FERMENTATIONS FROM ANYWHERE!

TANKNET® LITE is an extremely affordable temperature control solution designed specifically for small to mid-sized wineries.

Powered by Acrolon's new SmartServer Web-appliance, TANKNET® LITE allows winemakers to remotely monitor and control wireless TANKNET® thermostats, view fermentation graphs and receive temperature alarm notifications via e-mail or cell phone. The SmartServer also facilitates more energy efficient chiller operation by signaling when one or more tanks is calling for cooling.

TANKNET® LITE is remarkably easy to install. The system requires NO network wiring on the tank, NO Windows® server and NO software installation of any kind. Exclusive network technology allows the SmartServer to securely and reliably communicate with tank thermostats over existing electrical wires in the cellar.

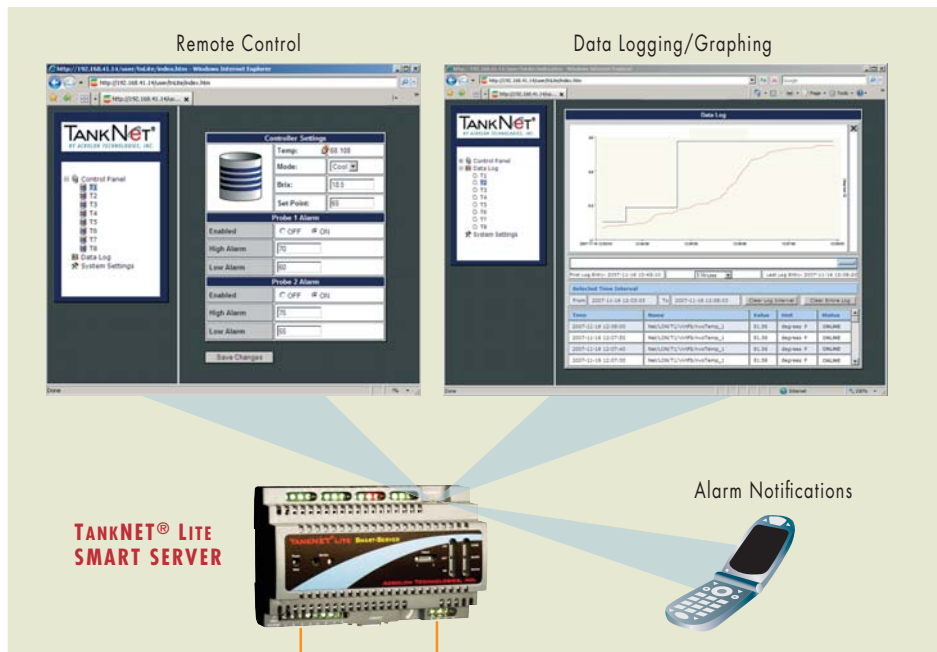

With its simple installation, intuitive Web-browser interface and renowned product support, TANKNET® LITE gives winemakers the control they need and the peace of mind they want – at a price they can afford!

Call today or visit us on the web to learn how TANKNET® can help you better manage fermentations this harvest.

# TANKNET® LITE

WEB-ENABLED TEMPERATURE CONTROL FOR SMALL WINERIES

**NO NETWORK WIRE • NO SOFTWARE • NO WINDOWS® SERVER**

## SOFTWARE FEATURES:

- Intuitive Web Interface
- Easy Access & Control
- Automatic Data Logging
- Fermentation Graphing
- Alarm Notifications

## ENERGY SAVINGS

SmartServer automatically signals chiller whenever one or more thermostats calls for cooling

**TANKNET® LITE  
SMART SERVER**
